WESTRUP **PROJECTS**

EQUIPPED FOR CHANGE

OUR PROJECT **SOLUTIONS**

> With our project solutions you are given guidance and support during the entire process of finding the right machine setup to installing them at your site. For this, we offer services ranging from pre-engineering to full project responsibility.

With you, we pinpoint your needs and design the solution that is exactly right for you. By combining your needs with our joined knowledge and experience of production plants, we are certain that you will get the best outcome.

To ensure a reliable and stable plant that will run for many years, we make sure to consider the challenges you are facing and involve all necessary stakeholders in the process when working out the best solution for you.

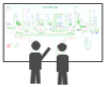

CONTINUOUS SUPPORT

> We offer continuous support from the initial phases till the entire plant is installed at your site.

PROCESS CONSULTANCY

Whether you are looking to build a new production line or optimize an existing, you have our support during the entire process. With you, we will uncover your challenges and create the solution to solve these. To increase your productivity and profitability, we make sure to integrate existing resources when designing your solution.

CONCEPT ENGINEERING

We create concept drawings for you to visualize the process flow and plant layout. With this, you are able to get involved in the design of your plant. To give you the best solution, we make sure to involve all necessary stakeholders during this phase.

DETAILED PROJECT MANAGEMENT

Once you, in cooperation with us, have settled on the requirements for your plant, we design the detailed layout. Based on this, our project manager coordinates all internal and external activities throughout the entirety of the project. A detailed plan will ensure that your project runs on time and on budget.

INSTALLATION AND COMMISSIONING

We offer installation and commissioning ranging from single machines to full-site management of complete plants taking all suppliers under our supervision. Our site-supervisor works in close cooperation with our project manager to ensure a cost and time efficient installation.

AFTER-SALES SERVICE

After your plant is up and running, you still have us as a partner. You can always contact us for preventive maintenance, regular service or your very own tailored service solution.

WE MANAGE YOUR **PROCESS**

> When choosing a project with us, we make sure to have all our resources available to you.

PROJECT MANAGER

Your main contact person is our project manager. Your project manager will coordinate all activities throughout the entire project to ensure that your project runs smoothly and according to budget.

ON-SITE SUPERVISOR

Our on-site supervisor oversees and coordinates all daily activities on-site and works in close collaboration with our project manager to ensure that the project runs on time.

ENGINEERING SUPPORT

Our engineers have years of experience in designing tailored project solutions. Their drawings of your future plant will allow you to visualize your production line and follow the progress as the project moves forward.

TEST CENTRE FACILITIES

In our test centre you can have your product tested. This way we can see how your product reacts when processed. With this information, we can then show you the solution that will be exactly right for your seed.

SERVICE ENGINEERS

After your plant is up and running, we offer a wide range of service plans to keep your plant as productive and efficient as possible. Keeping on track with preventive maintenance can secure your uptime.
